Pg-1 Data Profiler

PART - A & Fundamentals

1) What is data analysis?

ans Data analysis is the Process of collecting, cleaning, transforming, exploring and interpreting data to discover useful information, Patterns and insights for decision-making.

2) How to Plan a data Science Project, Listing all Steps.

ans Step-1, Define the Problem

Step-2, Collect data from different ^{sources}

Step-3, understand the data.

rows, columns, data types,

missing values, duplicate values

unique values.

Step-4, Data cleaning.

Step-5, Exploratory data analysis

Step-6, Feature Engineering

Existing data se new useful

Features create kange.

Step-7, Visualization
Charts create karengae,
Like, Bar chart, Pie chart
Box Plot. Scatter Plot.

Step-8, machine Learning
Training data + Testing data
divide karengae.

Step-9, Module Evaluation.
module ko evaluate karengae
Accuracy, Precision, Recall
F1-Score, Confusion matrix

Step-10 Conclusion

3 Frame a machine learning Problem
State ment ?

ans Step 1, Problem type
Step 2, Target Variable
Step 3, Features
Step 4, Classification

machine Learning is a Project Supervised binary Classification Problem where I Predict customers churn using customer Purchase behaviour.

4 What is Tensors ?

ans Tensor is a multidimensional array used to store numerical data.

Scalar - 0D

Vector - 1D

matrix - 2D

Tensor - 3D or higher

Tensor is a general term that also includes 0D, 1D and 2D array.

In numpy we commonly represent tensors using ndarray objects.

The END.
